

## Sacd dvd Audio Cable

SACD/DVD-Audio Cable :

Enjoy Your Favorite Music in Spectacular SACD or DVD-Audio Surround—But Only with the Right Connections

Today's movies and music recordings played on SACD and DVD-Audio format players contain more information than ever before, bringing higher resolution, extended frequency response and wider dynamic range to your home system—along with the potential to listen in stunning surround sound. But they can't do that without the advanced interconnect cables that have the ability to transfer these complex signals. Poorly constructed cables made of inferior materials are simply incapable of transferring all the signals that better components deliver, effectively giving you less than they have to offer. And if you're not already plugged into all six channels, you're missing up to two-thirds of what you could be hearing in all-encompassing surround sound.

Precision Technology for Top Performance

Monster's SACD/DVD-Audio Cable, featuring advanced Interlink 400 MkII technologies, is the one cable you need to bring out all the clarity, depth and power of your enhanced audio components and the revolutionary SACD and DVD-Audio formats themselves. Bass notes are deep and tight.

Transients are faster, revealing greater detail whether it's a light cymbal tap on your favorite CD or the tinkling of glass from a shattered window in a movie. Imaging is precise, providing tremendous depth and incredible accuracy of soundstage. And its improved phase response delivers a smoothness and feel that's so natural you'll marvel at just how good your system sounds—from every angle.

## M550i SACD/DVD-Audio Cable:

High resolution audiophile audio interconnect provides superb clarity and dynamics so you hear your favorite SACD and DVD-Audio titles like never before.

*Enjoy Your Favorite Music in Spectacular SACD or DVD-Audio Surround sound—but only with the Right Connections*

The world's finest music has been chosen by the greatest recording engineers to be remixed in ultra-high resolution multi-channel surround sound. With SACD and DVD-Audio, you can now enjoy a musical experience with clarity and dynamic range over and above that of conventional CD format. For you technocrats, DVD-Audio offers 96k plus sampling rates vs. 44k for CD, and 24-bit resolution vs. 16-bit. Now there's a technologically advanced cable that provides the all-important link to that advanced technology, designed specifically to bring out the best sound these enhanced formats offer: the M Series M550iHR SACD/DVD-Audio.

**An Extraordinary Cable for Audiophiles & Serious Music Listeners**

Specially designed for the serious listener who desires to extract every last nuance of musical performance, the M550iHR provides extraordinary audio performance down to the last detail—especially in the areas of soundstage, imaging, resolution of inner detail, dynamic range, transient response, lower “intertransient noise” and the overall tonal and harmonic structure of the music. The innovations here are for those who can appreciate the subtleties of music reproduction and the ability to communicate the musical message. The cable establishes a new standard for sonics and manufacturing excellence, bringing us one step closer to a live performance.
