

VELODYNE:

MICROVEE

The MicroVee is an amazingly small self-powered subwoofer that has unbelievable output. This sub fits virtually anywhere, yet provides enough output to fill even larger rooms with deep, powerful bass. It sports LFE, speaker level, or mini-jack input capability, making it perfect for home theater, precision audio, or gaming applications. The size/price/performance equation makes the MicroVee the hands-down best-in-class subwoofer winner. The MicroVee is the smallest sub Velodyne has ever made, but once you experience its phenomenal bass output and impact, you'll think it's the biggest. With a ribbed extruded aluminum cabinet, it's also the coolest-looking subwoofer ever.

Features

One active 6.5" driver (5" piston diameter)

Two 6.5" passive radiators (5" piston diameter)

Tiniest Velodyne ever made at 9" x 9" x 9.6" HWD

Patented Energy Recovery System amplifier (2000 watts Dynamic Power)

Ribbed extruded aluminum cabinet that dissipates heat build up.
